Technical Advice

Ceiling Fan Selection

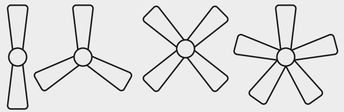

How to select your fan?

Sweep Size is referred to the entire diameter of a fan.

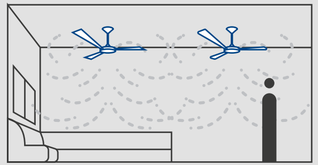

Higher RPM does not mean higher air flow. Air flow / Air delivery is the only point of comparison in selecting a ceiling fan.

More fan blades do not give better air flow.
A four or five blade ceiling fan provides a more conventional, balanced look, whereas a fan with two or three blades possesses a modern and sleek style.

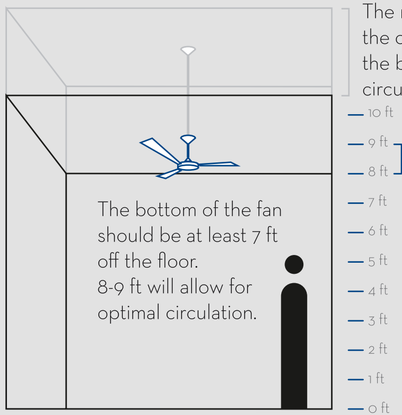

Sweep Size	Room Size
600 mm (24")	Small shop, cabin or Powder Room
750 mm (30")	6 X 10 ft
900 mm (36")	7 X 10 ft
1050 mm (42")	10 X 10 ft
1200 mm (48")	12 X 13 ft
1300 mm (52")	13 X 14 ft
1400 mm (56")	14 X 16 ft

For a much more larger room, consider using two fans to balance the air circulation in all parts.

Optimal Height

For ceilings that are taller than nine feet, add 6" to the downrod for every foot of height.

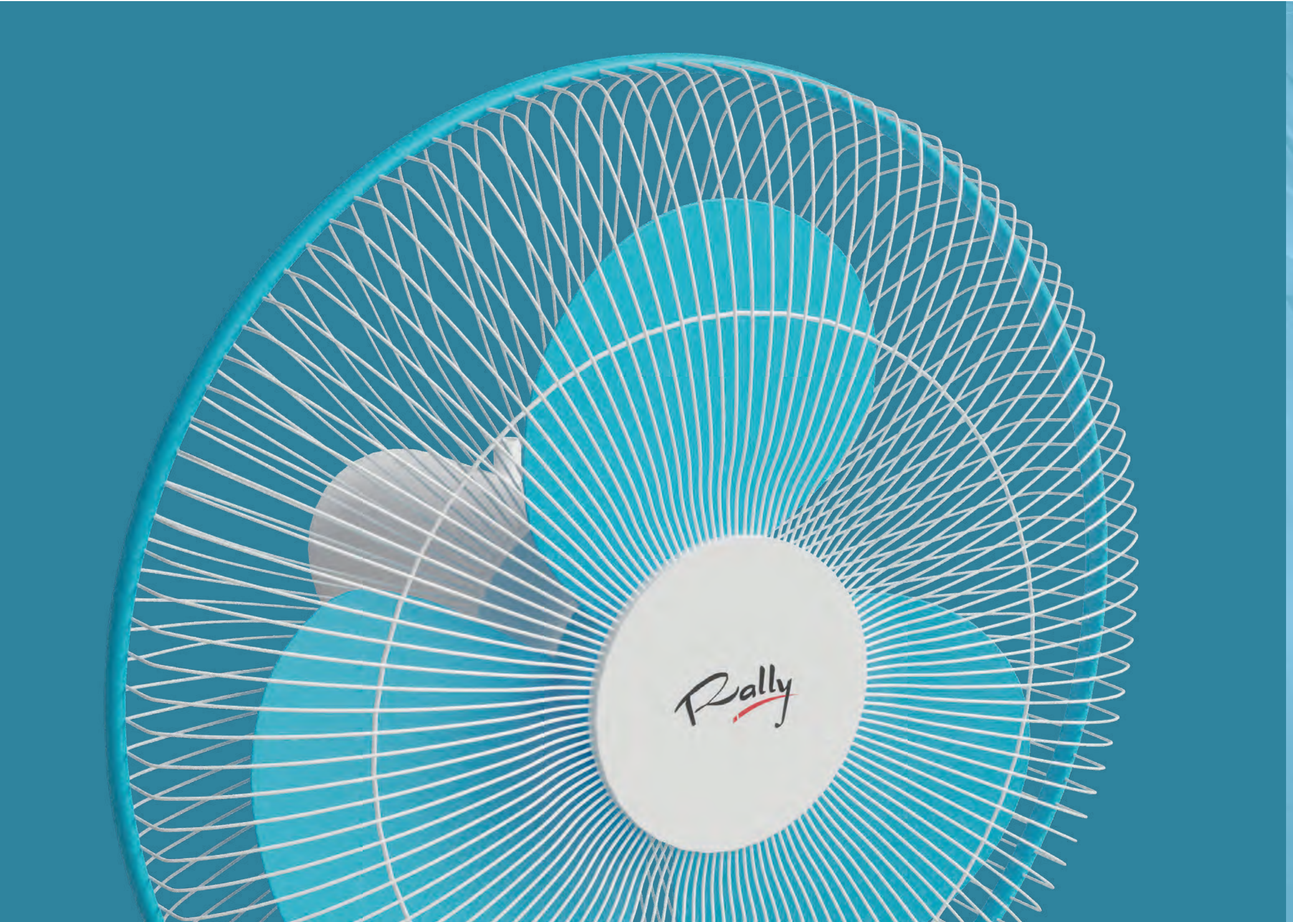

The more space between the ceiling and the blades, the better for air flow and circulation.

10 ft
9 ft
8 ft
Optimal height
